PREFACE

The Industrial Arts Index has entered upon its twentieth year. Beginning with the indexing of about fifty periodicals in 1913 and publishing five times a year, it now indexes over two hundred and thirty periodicals and publishes thirteen numbers a year including the annual, or biennial, cumulation. At the beginning of the two-year period covered by this volume about thirty periodicals were added to the list of those indexed, among them a group of insurance magazines. The list of periodicals indexed does not however represent the scope of the Index. Bibliographies and other reference helps wherever found are included. Books of interest to special libraries are listed by subject each month in a section, "Recent Book Titles," preceding the main alphabet of which it later forms a part. The subject entries for these books listed in 1930 and 1931 number 4644. In this number are not included the many pamphlets indexed; United States government publications, state geological and engineering bulletins, university bulletins relating to technology or business, and many others.

The list of technical societies and commercial organizations on the following pages revises and supplements the directory published in the 1928-1929 volume.
